

## Diode Laser 532

This laser generates an intense beam of light which brings energy to a specific site through a hand piece connected to the laser console. The laser light is absorbed by oxyhemoglobin (bright red blood cells carrying oxygen) and melanin / pigment (black or brown pigment found in the skin). This heat absorption causes decomposition or destruction of unwanted cells while leaving healthy cells intact.

	Price per Treatment
Test Spot	<b>\$160</b>
Small Area (15 minutes)	<b>\$340</b>
Medium Area (30 minutes)	<b>\$475</b>

\*Prices subject to change without notice.

\*Numbing cream is applied 30 minutes before treatment
