

Ultherapy®

This revolutionary new device uses ultrasound for non-invasive skin lifting, tightening, and firming. It can be used to lift the eyebrows and to firm and tighten the lower face and neck. The Ulthera™ uses ultrasound energy to stimulate collagen production deep below the skins surface without harming the outer epidermis. This means great results with zero downtime and no surgery.

How Does Ultherapy Work?

Focused Ultrasound energy is delivered non-invasively and selectively to the dermal layer as well as the skin's deep support structures without affecting intervening tissue. This is all done around the eyes, cheeks, and upper neck.

Full Face + Neck	\$5,000	Full Face and Neck Ultherapy™
